

Essential Move Plus

What's in the box – parts and cables

Essential Plus is a flexible and light weight integrated device which provides a fast and simple way to process card payments by integrating seamlessly with your choice of PC EFTPOS certified Point Of Sale.

Integrating the Essential Plus terminal with your POS

The Essential Plus terminal can integrate with your PC-EFTPOS-certified POS system by the following two methods:

- Using the serial cable (OCLR323 EFT30 Cable) which should connect to either the COM0 or COM1 port on the bottom of the base.
- Using the USB cable (USB Type B to Type A Cable) which should be connected to the USB type B Jack of the base.

3G Backup

If the Point of Sale loses internet connection, the Essential Plus terminal can fall back to the 3G connection via the internal modem in the terminal. The PC EFTPOS client on the POS will need to be configured to use the terminals 3G fall back capability for 3G backup to work.
